

# Mekong River Commission

## Regional Flood Management and Mitigation Centre

### Weekly Flood Situation Report for the Mekong River Basin

Prepared at: 07/08/2017, covering the week from the 31<sup>st</sup> July – 07<sup>th</sup> August 2017

#### General Behaviour of the Mekong River and Flood Situation

##### Over weather situation

During last week, there was rainfall happened in many parts of the LMB, most of heavy rainfalls happened in the middle reach of LMB. The first three maximum accumulated rainfalls were at Paksane (278.9 mm.), Stung Treng (159 mm.) and Koh Khel (171.5 mm.), see Figure 1 and Table A2 for more details.

Figure 1: Accumulated Rainfall Distribution over the LMB from 31<sup>st</sup> July – 07<sup>th</sup> August 2017

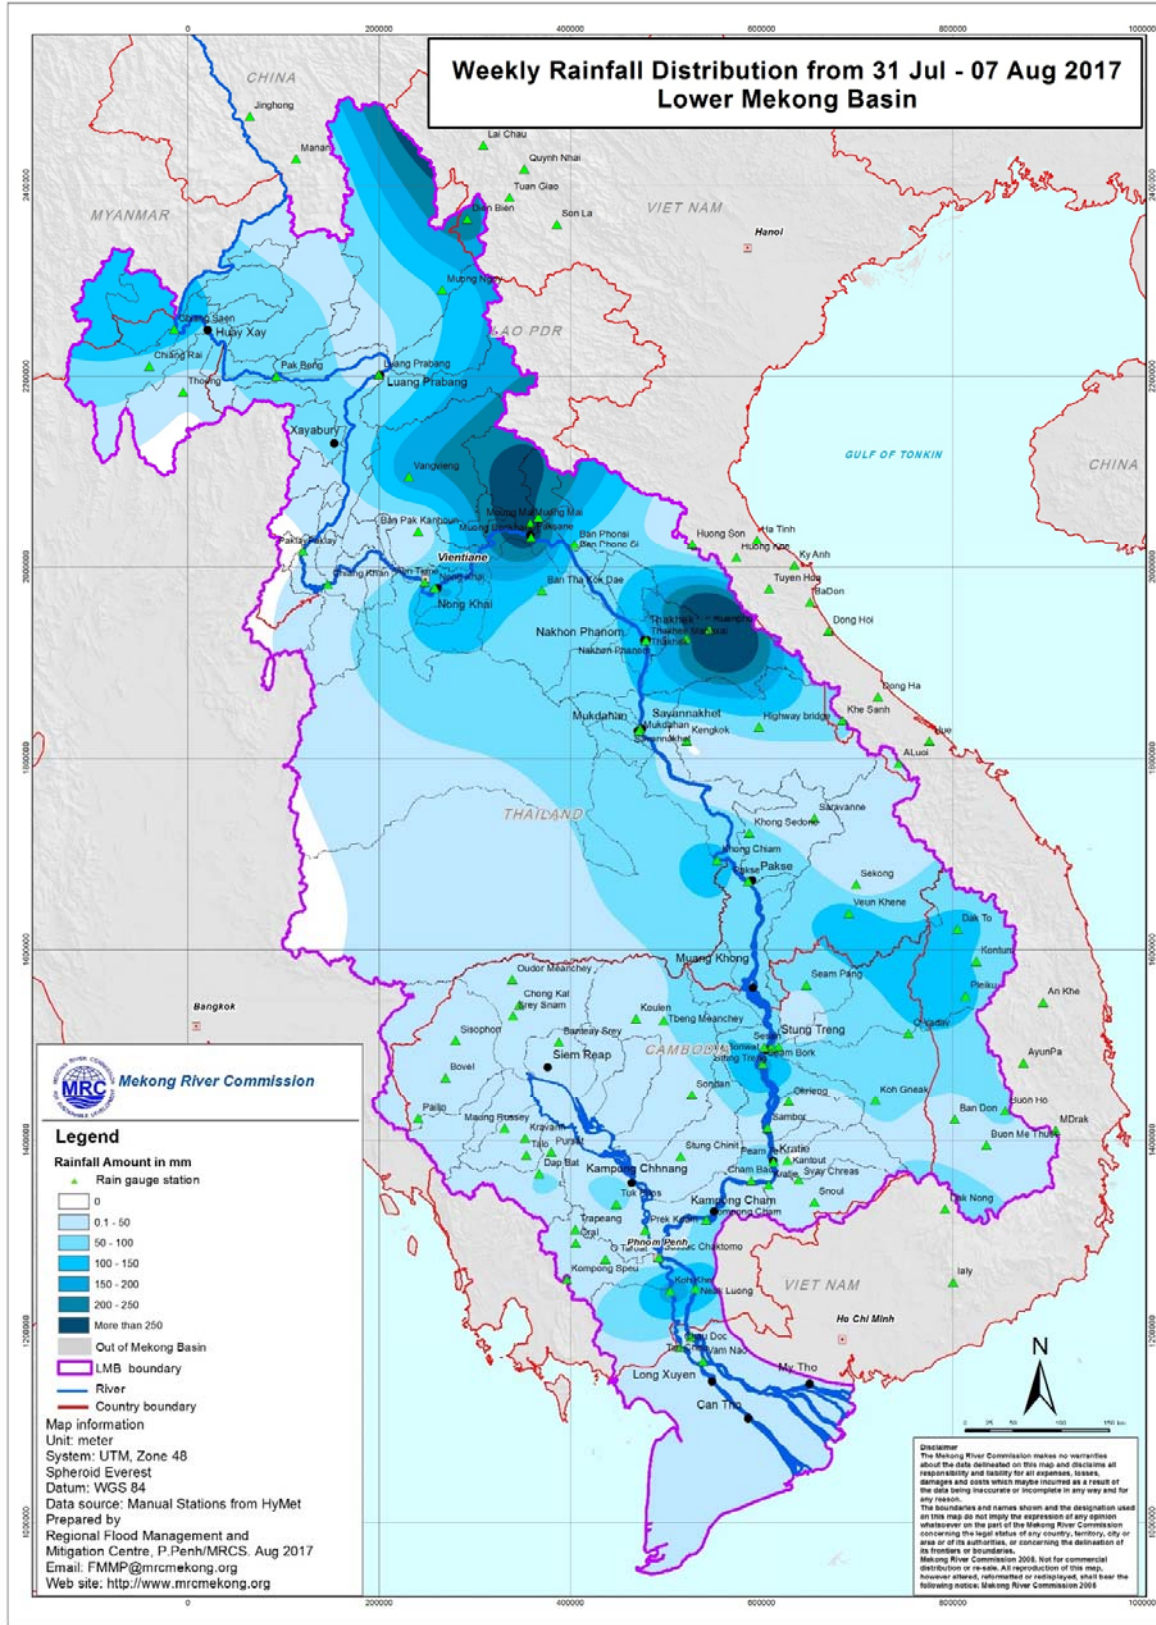

Figure 2: Weekly Rainfall Distribution over the LMB from 31<sup>st</sup> July – 07<sup>th</sup> August 2017

### **General behaviour of the Mekong River**

Compared the Long Term Average (LTA) during the last week, the water levels at upper and upper middle reaches of LMB were fluctuated below, but the lower middle and lower reaches of LMB were above the LTA, respectively.

#### ***For stations from Chiang Saen and Luang Prabang***

During the last week, the water levels at Chiang Saen and Luang Prabang were fluctuated below the LTA.

#### ***For stations from Chiang Khan, Vientiane and Nong Khai and Paksane***

During the last week, the water levels at these stations were fluctuated below the LTA.

#### ***For stations from Thakhet/Nakhon Phanom to Pakse***

During the last week, the water levels at these stations were fluctuated above the LTA.

#### ***For stations from Stung Treng to Kampong Cham***

During the last week, the water levels at these stations were fluctuated above the LTA.

#### ***For stations from Phnom Penh to Koh Khel/Neak Luong***

During the last week, the water levels at these stations were fluctuated above the LTA.

#### ***Tan Chau and Chau Doc***

During the last week, the water levels at these stations were fluctuated above the LTA.

**Note:** For areas between forecast stations, please refer to the nearest forecast station.

### **Flood Situation**

- Flood stage or alarm stage:

Pakse and Koh Khel had reached alarm stage during 31 July – 1 Aug 2017 and 31 July – 4 Aug 2017 during the last week, respectively. Water levels were still significantly below flood levels (as defined by the national agency) at all forecast stations.

- Damage or victims:

No damage or loss of life due to river flooding was recorded anywhere along the Mekong River during the last week.

For more details see the following annexes:

- tables and graphs for water level and rainfall for the last week in Annex A
- a graph for accuracy in Annex B
- a table of forecast achievement in Annex B
- tables and graphs for performance in Annex B
- the water level graphs showing the observed water level for the season in Annex C
-

**Annex A: Graphs and Tables****Table A1: observed water levels**

## Annex B: Accuracy and performance

### Accuracy

“Accuracy” describes the accuracy of the adjusted and published forecast, based on the results of the MRC Mekong Flood Forecasting System, which are then adjusted by the Flood Forecaster in Charge taking into consideration known biases in input data and his/her knowledge of the response of the model system and the hydrology of the Mekong River Basin. The information is presented as a graph below, showing the average flood forecasting accuracy along the Mekong mainstream.

In general, the overall accuracy is good for 1-day to 5-day forecast lead time at all stations in the LMB. However, the accuracies at Vientiane, Paksane and Mukdahan to Pakse

for 1-day forecast; Vientiane, Paksane, Mukdahan and Savannakhet for 2-day to 5-day forecast were less than expected.

The above differences due to two main factors: (1) internal model functionality in forecasting; for which the parameter adjustment in the model is not possible especially at stations in the upper part and in the Mekong delta where are affected by tidal; (2) the adjustment by utilizing the practical knowledge and experience of flood forecaster-in-charge; (3) the heavy rainfall happened in many tributaries inside the LMB. See the Figure B1 and table B1 for more detail.

Figure B1: Average flood forecast accuracy along the Mekong mainstream (from 31<sup>st</sup> July – 07<sup>th</sup> August 2017)

**Forecast Achievement**

The forecast achievement indicates the % of days that the forecast at a particular station for a lead-time is successful against a respective benchmark (Table B2).

Table B1: Achievement of daily forecast against benchmarks

Unit in %

	Chiang Saen	Luang Prabang	Chiang Khan	Vientiane	Nongkhai	Paksane	Nakhon Phanom	Thakhek	Mukdahan	Savannakhet	Khong Chiam	Pakse	Stung Treng	Kratie	Kompong Cham	Phnom Penh (Bassac)	Phnom Penh Port	Koh Khel	Neak Luong	Prek Kdam	Tan Chau	Chau Doc	Average

**Note:** An indication of the accuracy given in the Table B2 is based on the performance of the forecast made in 2008 from the new flood forecasting system and the configuration for the 2009 flood season and is published on the website of MRC (<http://ffw.mrcmekong.org/accuracy.htm>).

A new set of performance indicators that is established by combining international standards and the specific circumstances in the Mekong River Basin, is applied officially for the flood season of 2011 onward.

**Performance**

Performance is assessed by evaluating a number of performance indicators, see table and graphs below:

Table B3: Overview of performance indicators for the past 5 days including the current report date

	Flood Forecast: time sent			Weather information available (number)	Arrival time of input data (average)							Missing data (number)						
	FF completed and sent (time)	stations without forecast	FF2 completed and sent (time)		NOAA data	China	Cambodia - DHRW	Cambodia - DOM	Lao PDR - DMH	Thailand - DWR	Viet Nam - NCHMF	NOAA data	China	Cambodia - DHRW	Cambodia - DOM	Lao PDR - DMH	Thailand - DWR	Viet Nam - NCHMF
<b>2017</b>																		
<i>week</i>	10:16	0	-	0	08:15	07:10	07:20	08:07	08:17	07:40	08:06	0	0	5	34	343	38	0
<i>month</i>	10:10	0	-	-	08:15	07:10	07:28	08:18	08:23	07:40	08:00	0	0	16	69	1402	106	82
<i>season</i>	10:07	0	-	0	08:15	07:10	07:29	08:06	08:26	07:41	07:51	0	0	71	140	3141	205	134

*Week* is the week for which this report is made; *Month* is actually the last 30 days (or less if the flood season has just begun); *Season* is the current flood season up to the date of this report.
