

Mekong River Commission

Regional Flood Management and Mitigation Centre

Weekly Dry Season Situation Report for the Mekong River Basin

Prepared at: 17/11/2014, covering the week from the 10 to the 17 November 2014

Weather Patterns, General Behaviour of the Mekong River and Dry Season Situation

General weather patterns:

No critical weather during the last week

General behaviour of the Mekong River:

During last week, compared to long term average (LTA) water levels (WL) from Chiang Saen to Tan Chau Doc were fluctuating below LTA.

For stations from Chiang Saen and Luang Prabang

Compared to long term average (LTA), during last week the water level at these stations were below the LTA.

For stations from Chiang Khan, Vientiane and Nong Khai and Paksane

Compared to long term average (LTA), during last week the water level at these stations were recessing below LTA except Paksane that still above the LTA.

For stations from Nakhon Phanom to Pakse

Compared to long term average (LTA), during last week the water level at these stations were below the LTA and approached the LTA at the end of week.

For stations from Stung Treng to Kampong Cham

Compared to long term average (LTA), during last week the water level at these stations were below the LTA.

For stations from Phnom Penh to Prek Kdam

Compared to long term average (LTA), during last week the water level at these stations were below the LTA.

Tan Chau and Chau Doc

Compared to long term average (LTA), during last week the water level at these stations were below the LTA.

Dry season situation

Water levels at all forecast stations of the Mekong River during the last week are under normal condition. No rainfall for the last week.

For more details see the following annex:

- Tables for water level and rainfall for the last week in Annex A
- The water level graphs showing the observed water level for the season in Annex B

Annex A: Graphs and Tables
