Weekly Dry Season Situation Report for the Mekong River Basin

Prepared at: 29/01/2019, covering the week from 22th to 28th January 2019.

Weather Patterns, General Behaviors of the Mekong River and Dry Season Situation

General weather patterns:

No critical weather situation over the Lower Mekong Basin, during this week. During the last week, the water levels at stations from upper to middle part of LMB has been fluctuated above their long-term averages (LTAs) due to inflow from upstream catchments, while at downstream part has been decreased significantly.

General behavior of the Mekong River:

From 22th to 28th January 2019, water levels along the lower Mekong River from Thailand's Chiang Saen to Lao PDR's Luang Prabang were fluctuating above their long-term averages (LTAs), but decreasing from last week. The trends were the same for the stations from Lao PDR's Vientiane to Cambodia's Kompong Cham. The lower reaches from Cambodia's Phnom Penh at Chaktomuk to Viet Nam's Tan Chau on the Mekong River and Chau Doc on the Bassac River experienced fluctuated around their LTAs.

For stations from Chiang Saen and Luang Prabang

Water levels from 22th to 28th January 2019 at Chiang Saen and Luang Prabang stations were stayed above their long-term averages (LTAs).

For stations from Chiang Khan, Vientiane-Nong Khai and Paksane

Water levels from 22th to 28th January 2019 at Chiang Khan, Vientiane, Nong Khai and Paksane were fluctuated above the LTAs.

For stations from Nakhon Phanom to Pakse

Water levels from 22th to 28th January 2019 at Nakhon Phanom to Pakse were also increased slightly above their LTAs.

For stations from Stung Treng to Kratie

Water levels from 22th to 28th January 2019 at Stung Treng to Kratie were also increased significantly above their LTAs.

For stations from Kompong Cham, Phnom Penh to Prek Kdam

Water levels from 22th to 28th January 2019 at Kompong Cham was increased above LTA, but from Chaktomuk on the Bassac River and Prekdam on the Tonle Sap River were stayed below their long-term averages (LTAs).

Tan Chau and Chau Doc

Water levels from 22th to 28th January 2019 at Tan Chau on the Mekong and at Chau Doc on the Bassac were fluctuated around their long-term averages (LTAs).

Dry season situation

Compared to the Long-Term Averages (LTAs), water levels at stations from Chiang Saen to Kompong Cham of the Mekong River were fluctuating above their LTAs, except from Chaktomuk to Tan Chau and Chau Doc water levels were fluctuating below their LTAs.

For details information on water levels and rainfall at each key station are described as follows:

- Tables for observed water levels and rainfall for the last week in Annex A
- The water levels graphs showing the observed water levels for the season in Annex B
