Weekly Dry Season Situation Report for the Mekong River Basin

Prepared at: 06/04/2015, covering the week from the 30th March to 06th April 2015.

Weather Patterns, General Behaviour of the Mekong River and Dry Season Situation

General weather patterns:

No critical weather during last week

General behaviour of the Mekong River:

Compared to the long term average (LTA) the water levels from Chiang Saen to Kompong Cham fluctuated above the LTA; from Phnom Penh Chaktomuk to Tan Chau and Chau Doc fluctuated about the LTA.

For stations from Chiang Saen and Luang Prabang

Compared to long term average (LTA), during last week the water levels at these stations fluctuated above the LTA.

For stations from Chiang Khan, Vientiane and Nong Khai and Paksane

Compared to long term average (LTA), during last week the water levels at these stations fluctuated above the LTA.

For stations from Nakhon Phanom to Pakse

Compared to long term average (LTA), during last week the water levels at these stations fluctuated above the LTA.

For stations from Stung Treng to Kompong Cham

Compared to long term average (LTA), during last week the water levels at these stations fluctuated above the LTA.

For stations from Phnom Penh to Prek Kdam

Compared to long term average (LTA), during last week the water levels at these stations fluctuated about the LTA.

Tan Chau and Chau Doc

Compared to long term average (LTA), during last week the water levels at these stations were fluctuating about the LTA.

Dry season situation

During last week, the water level off all mainstream stations in LMB was fluctuated. Little rainfall was occurred only on 30 March 2015 and for Kompong Cham, on 31 March and on 1 April for Paksane, Thakhek and Chiang Khan (see Table A2).

For more details see the following annexes:

- Tables for observed water levels and rainfall for the last week in Annex A
- The water levels graphs showing the observed water levels for the season in Annex B
