

# Mekong River Commission

## Regional Flood Management and Mitigation Centre

### Weekly Flood Situation Report for the Mekong River Basin

Prepared at: 30/10/2017, covering the week from the 23<sup>rd</sup> – 30<sup>th</sup> October 2017

#### General Behaviour of the Mekong River and Flood Situation

##### Over weather situation

During last week, there were some rainfalls happened in the upper and lower reaches of the LMB, most of heavy rainfalls happened in the lower reach of LMB. The first three maximum accumulated rainfalls were at Chiang Saen (57.4 mm.), Koh Khel (206.4 mm.) and Tan Chau (42.2 mm.), see Figure 1 and Table A2 for more details.

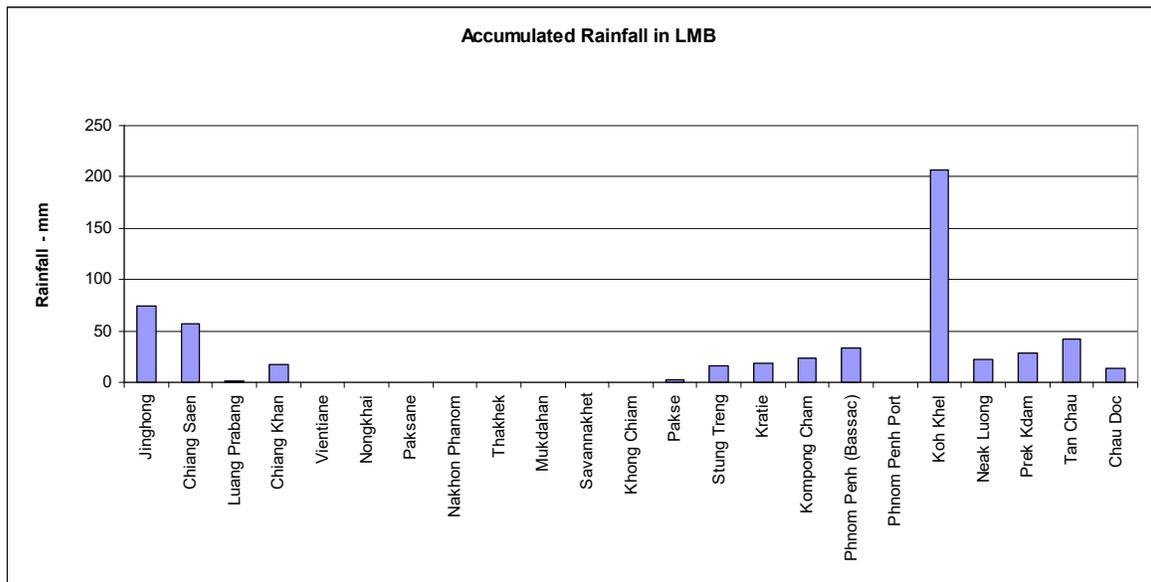

Figure 1: Accumulated Rainfall Distribution over the LMB from 23<sup>rd</sup> – 30<sup>th</sup> October 2017

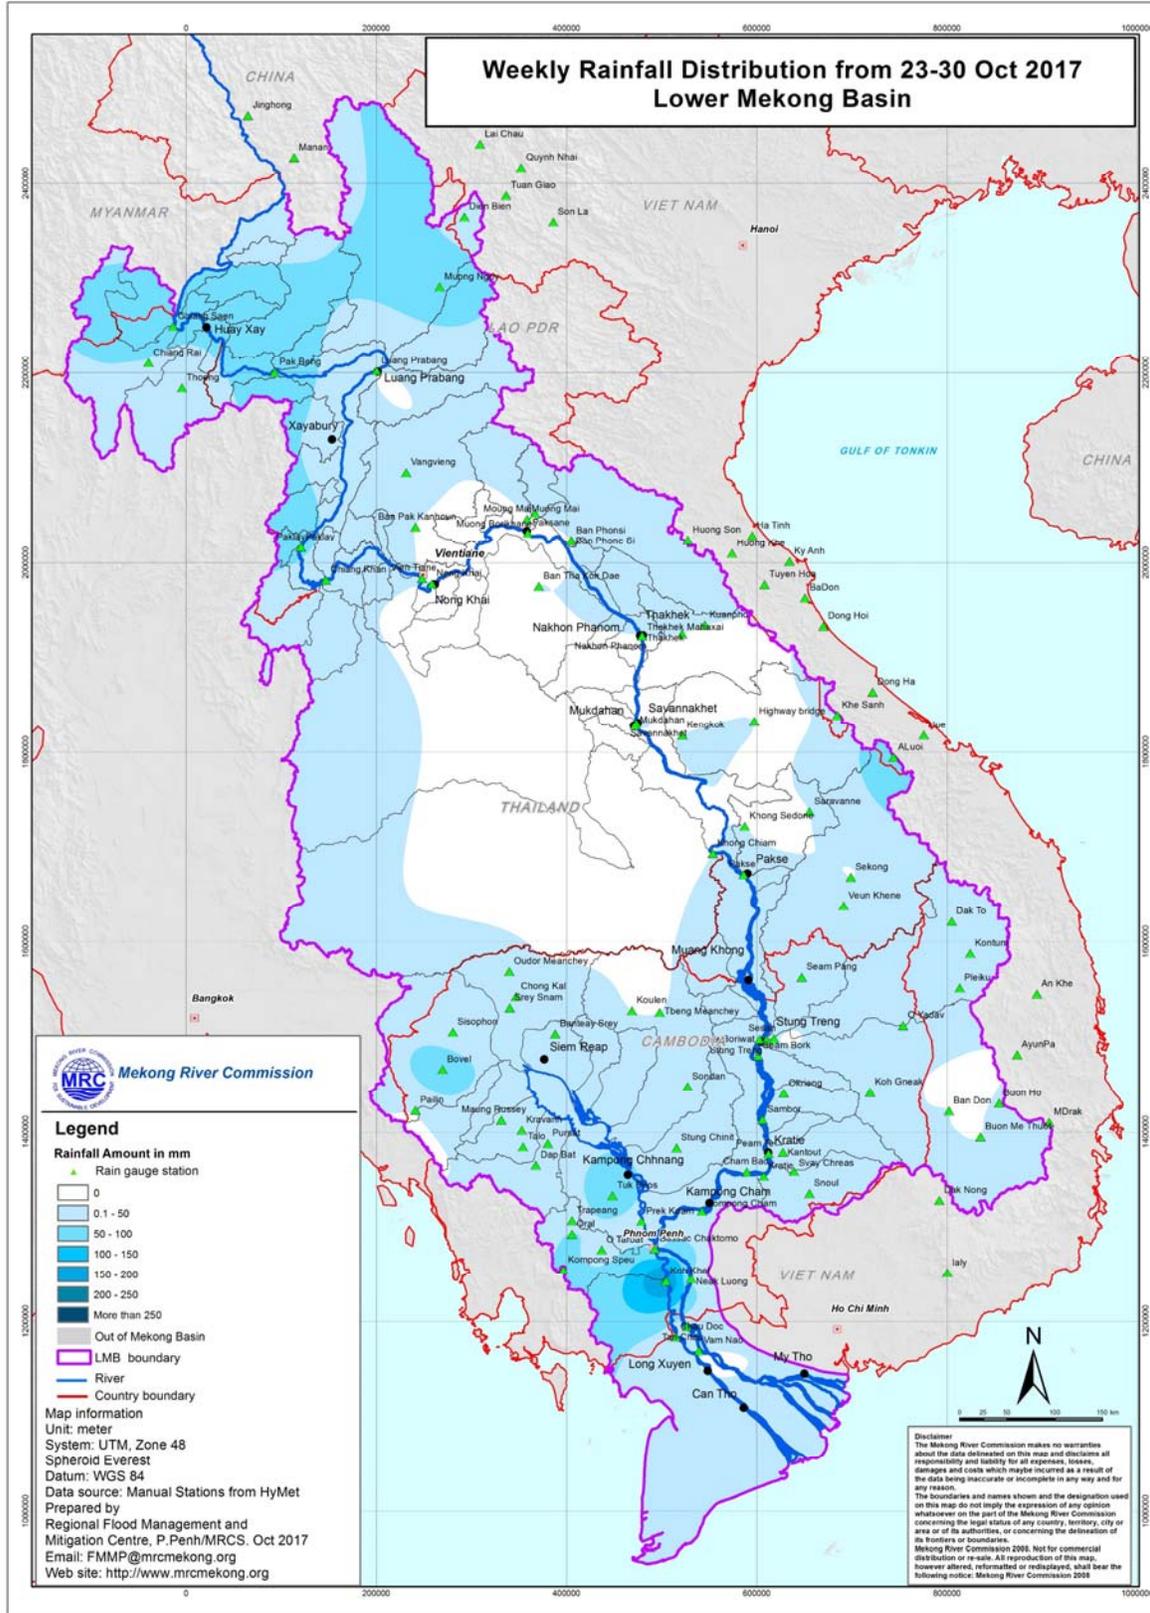

Figure 2: Weekly Rainfall Distribution over the LMB from 23<sup>rd</sup> – 30<sup>th</sup> October 2017

### **General behaviour of the Mekong River**

Compared the Long Term Average (LTA) during last week, the water levels in LMB were fluctuated above or about the LTA in the upper and middle reaches, and those of the lower reach were below the LTA.

#### ***For stations from Chiang Saen and Luang Prabang***

During the last week, the water levels at these stations were fluctuated above the LTA.

#### ***For stations from Chiang Khan, Vientiane and Nong Khai and Paksane***

During the last week, the water levels at these stations were fluctuated above the LTA.

#### ***For stations from Thakhet/Nakhon Phanom to Pakse***

During the last week, the water levels at these stations were fluctuated about or above the LTA, except Thakhet that was below the LTA.

#### ***For stations from Stung Treng to Kampong Cham***

During the last week, the water levels at these stations were fluctuated about or above the LTA, except Kampong Cham that was below the LTA.

#### ***For stations from Phnom Penh to Koh Khel/Neak Luong***

During the last week, the water levels at these stations were fluctuated below the LTA.

#### ***Tan Chau and Chau Doc***

During the last week, the water levels at these stations were fluctuated below the LTA.

**Note:** For areas between forecast stations, please refer to the nearest forecast station.

### **Flood Situation**

- Flood stage or alarm stage:

No alarm stage (where the forecast is expected to reach flood level within three days) was reported anywhere on the mainstream of the Mekong River during the last week. Water levels were still significantly below flood levels (as defined by the national agency) at all forecast stations.

- Damage or victims:

No damage or loss of life due to river flooding was recorded anywhere along the Mekong River during the last week.

For more details see the following annexes:

- tables and graphs for water level and rainfall for the last week in Annex A
- a graph for accuracy in Annex B
- a table of forecast achievement in Annex B
- tables and graphs for performance in Annex B
- the water level graphs showing the observed water level for the season in Annex C
-

## Annex A: Graphs and Tables

Table A1: observed water levels

## Annex B: Accuracy and performance

### Accuracy

“Accuracy” describes the accuracy of the adjusted and published forecast, based on the results of the MRC Mekong Flood Forecasting System, which are then adjusted by the Flood Forecaster in Charge taking into consideration known biases in input data and his/her knowledge of the response of the model system and the hydrology of the Mekong River Basin. The information is presented as a graph below, showing the average flood forecasting accuracy along the Mekong mainstream.

In general, the overall accuracy is good for 1-day to 5-day forecast lead time at all stations in the LMB. However, the accuracies at Chiang Saen, Lunag Prabang, Nong Khai and

Paksane for 1-day forecast, Chiang Saen, Nong Khai and Paksane for 2-day to 3-day forecast, were less than expected.

The above differences due to two main factors: (1) internal model functionality in forecasting; for which the parameter adjustment in the model is not possible especially at stations in the upper part and in the Mekong delta where are affected by tidal; (2) the adjustment by utilizing the practical knowledge and experience of flood forecaster-in-charge; (3) the heavy rainfall happened in many tributaries inside the LMB. See the Figure B1 and table B1 for more detail.

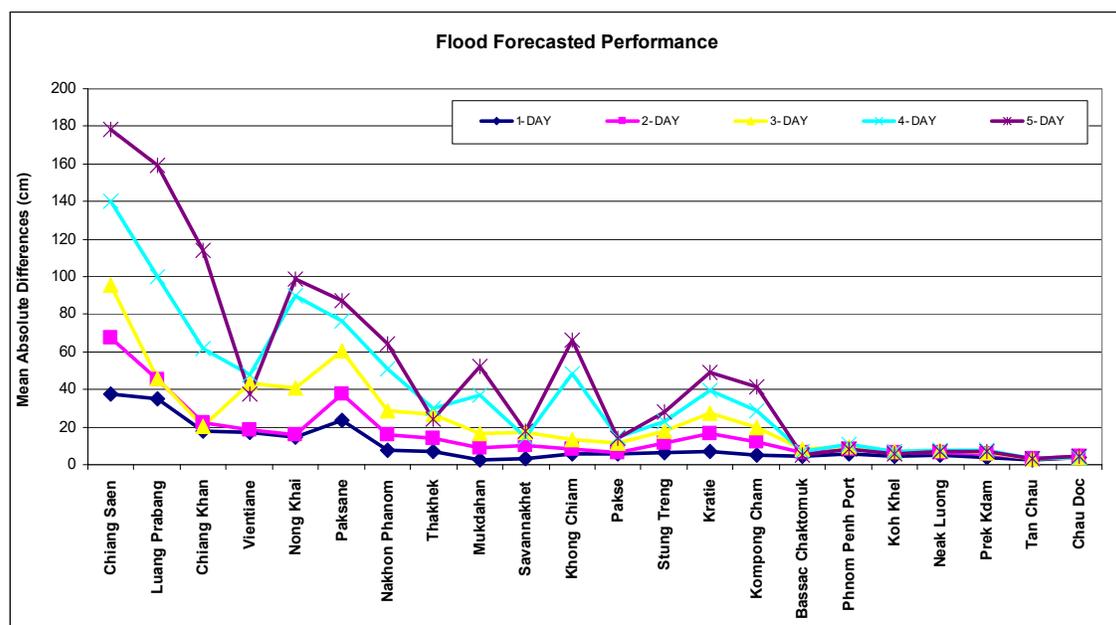

Figure B1: Average flood forecast accuracy along the Mekong mainstream (from 23<sup>rd</sup> – 30<sup>th</sup> October 2017)

### Forecast Achievement

The forecast achievement indicates the % of days that the forecast at a particular station for a lead-time is successful against a respective benchmark (Table B2).

Table B1: Achievement of daily forecast against benchmarks

Unit in %

|       | Chiang Saen | Luang Prabang | Chiang Khan | Vientiane | Nongkhai | Paksane | Nakhon Phanom | Thakhek | Mukdahan | Savannakhet | Khong Chiam | Pakse | Stung Treng | Kratie | Kompong Cham | Phnom Penh (Bassac) | Phnom Penh Port | Koh Khel | Neak Luong | Prek Kdam | Tan Chau | Chau Doc | Average |      |
|-------|-------------|---------------|-------------|-----------|----------|---------|---------------|---------|----------|-------------|-------------|-------|-------------|--------|--------------|---------------------|-----------------|----------|------------|-----------|----------|----------|---------|------|

**Note:** An indication of the accuracy given in the Table B2 is based on the performance of the forecast made in 2008 from the new flood forecasting system and the configuration for the 2009 flood season and is published on the website of MRC (<http://ffw.mrcmekong.org/accuracy.htm>).

A new set of performance indicators that is established by combining international standards and the specific circumstances in the Mekong River Basin, is applied officially for the flood season of 2011 onward.

### Performance

Performance is assessed by evaluating a number of performance indicators, see table and graphs below:

Table B3: Overview of performance indicators for the past 5 days including the current report date

|               | Flood Forecast: time sent    |                           |                               | Weather information available (number) | Arrival time of input data (average) |       |                 |                |               |                |                  | Missing data (number) |       |                 |                |               |                |                  |
|---------------|------------------------------|---------------------------|-------------------------------|--|--------------------------------------|-------|-----------------|----------------|---------------|----------------|------------------|-----------------------|-------|-----------------|----------------|---------------|----------------|------------------|
